LLMs can self-improve, but...

Cite from: Large Language Models Cannot Self-Correct Reasoning Yet

Un-reusable experience makes LLMs forgetful

Learning to correct mistakes by introducing a Cooperative Agent

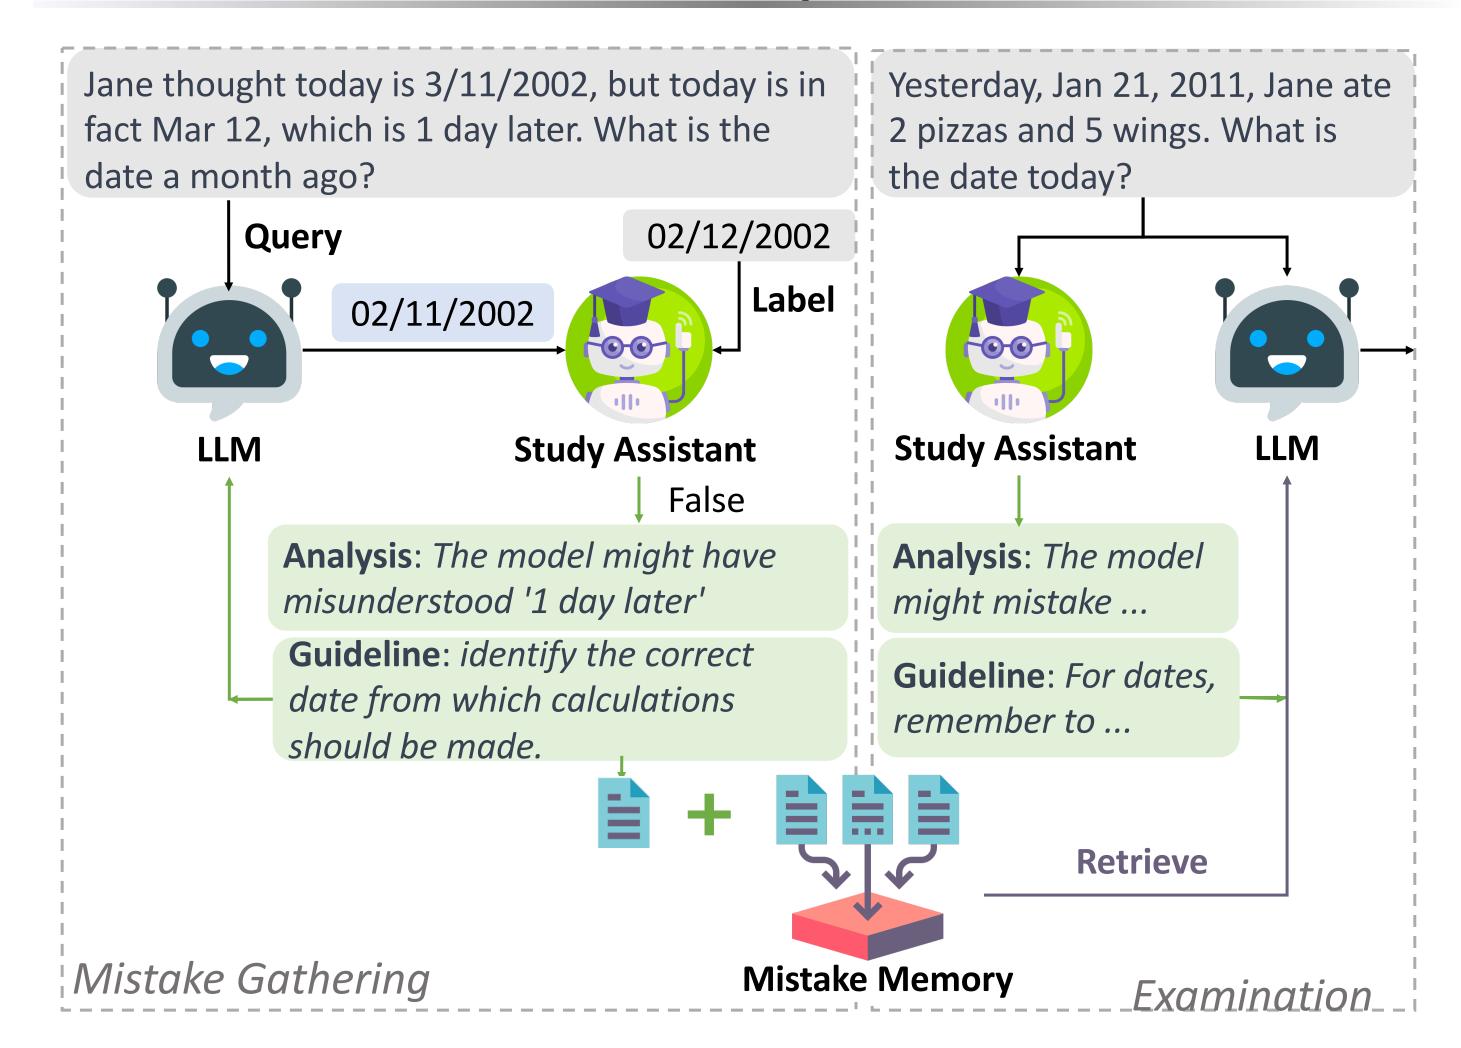

Main LLM: solve problem big (difficult to finetune)

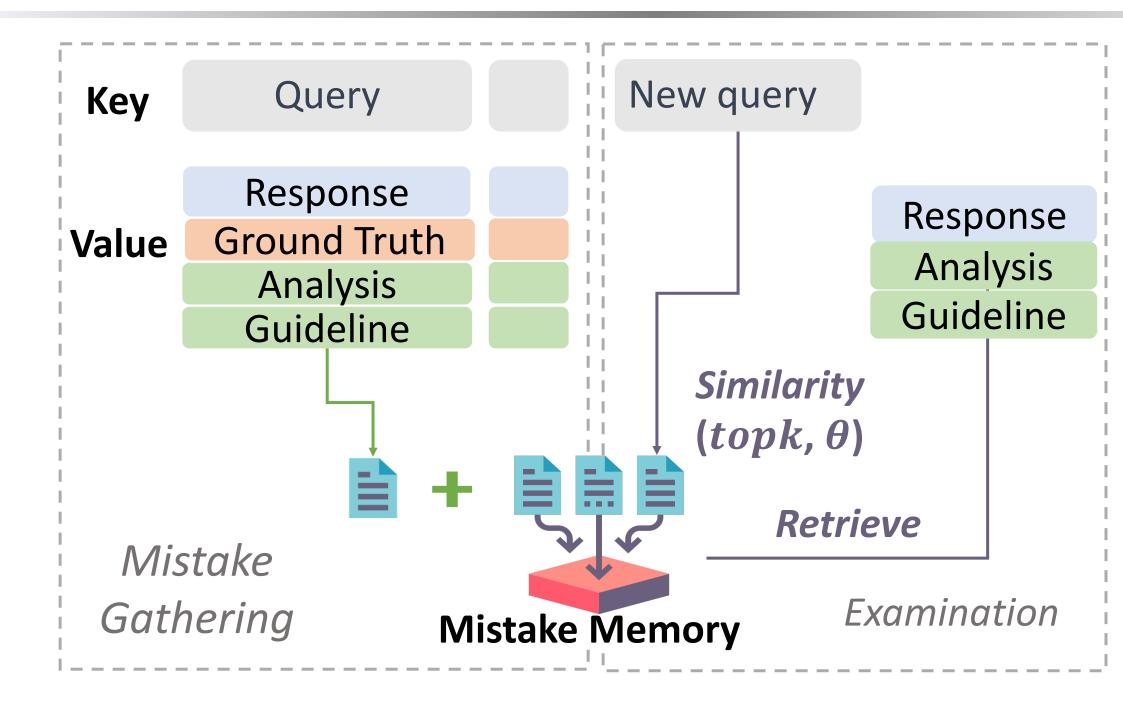

Study assistant: provide feedback (small, easy to train) => LLaMA 7B

SALAM: finetune a study assistant for LLM

Mistake Retrieval

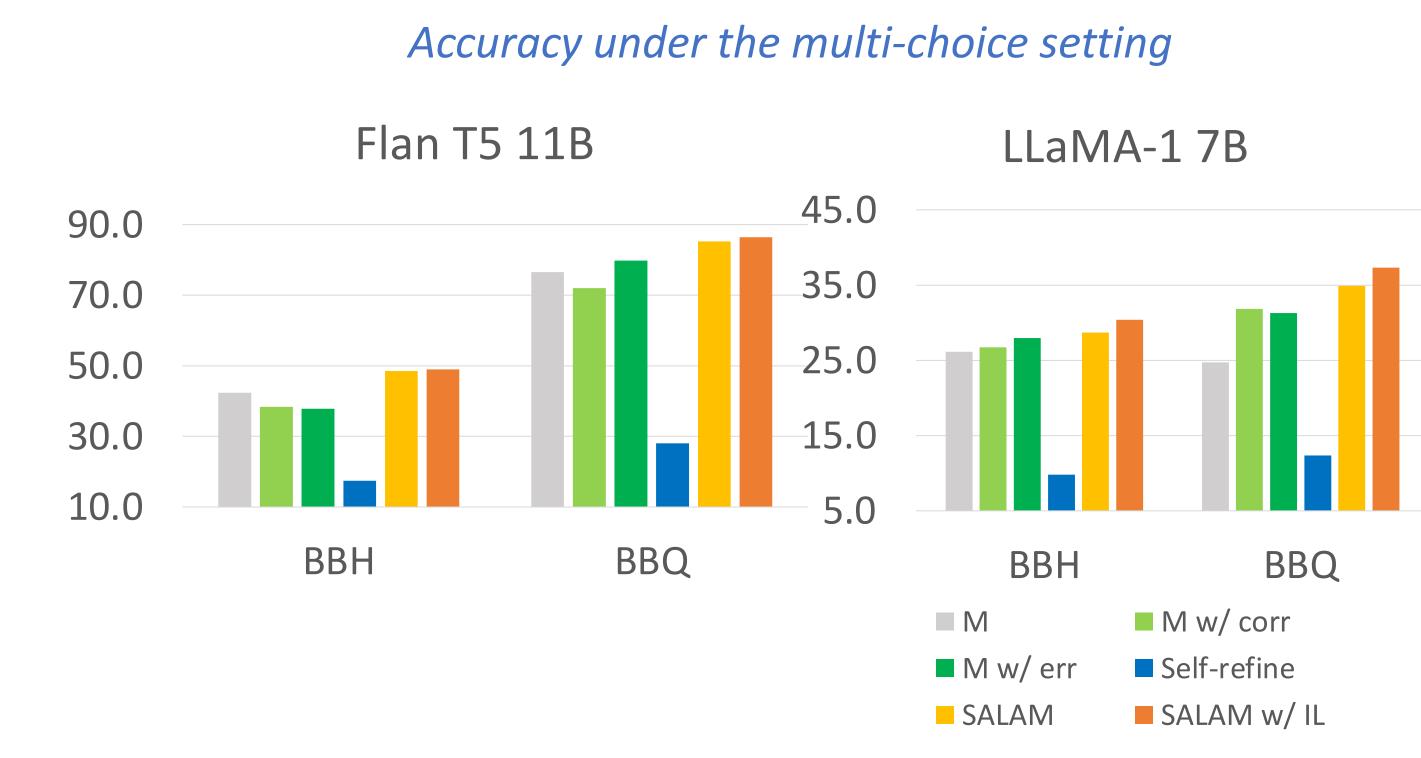

Model-specific Study Assistant by **Imitation Learning**

Provide specific suggestions for each LLM Each LLM has his own opinion!

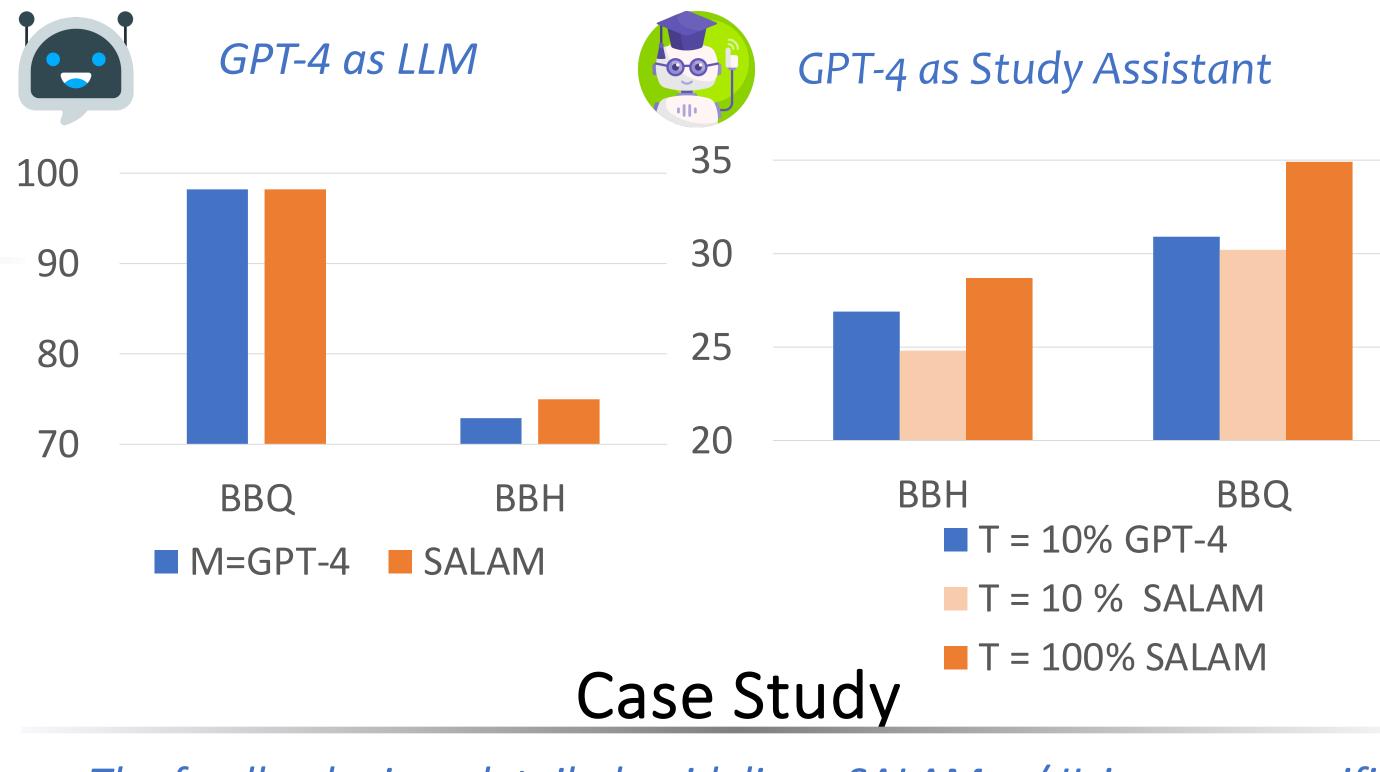

use performance of LLM to guide study assistant Policy $\pi(a|s)$: provide feedback based on current state State S: (query, response, context)

Action A: feedback generated by study assistant Reward R: the quality of LLM's response

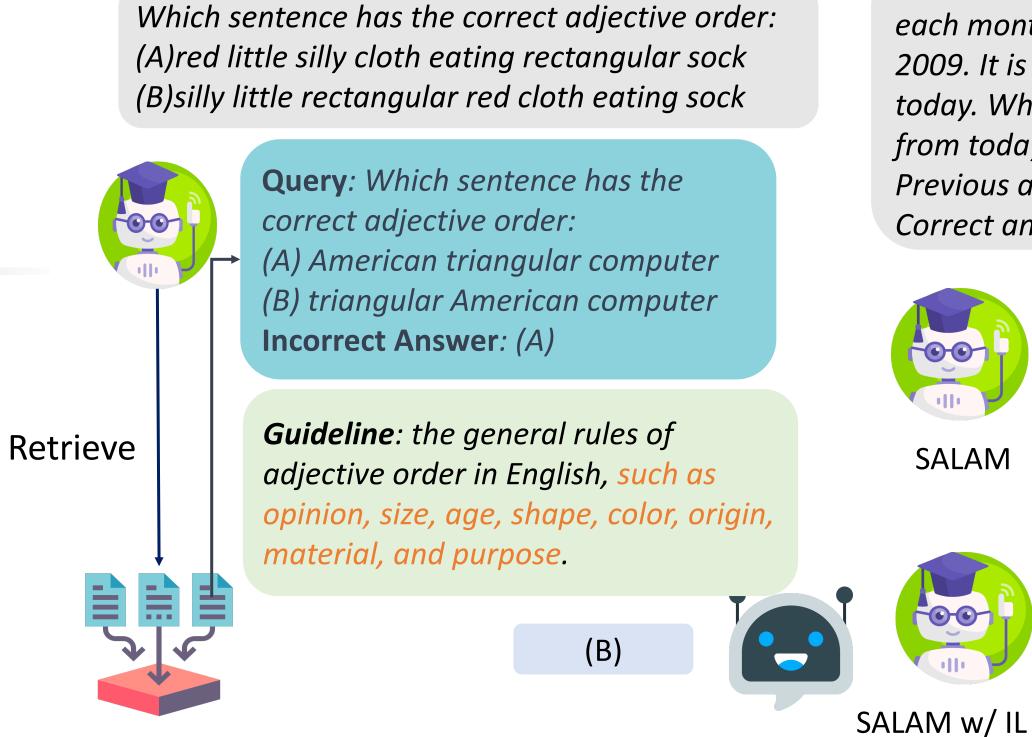

Cooperation makes LLMs better

SALAM further enhances GPT-4

The feedback gives detailed guideline; SALAM w/ IL is more specific

Mistake Memory

Jane visits the bookstore on the 16th of each month starting from the October of 2009. It is her 5th visit to the bookstore today. What is the date one year ago from today?

Previous answer: 08/16/2009 Correct answer: 02/16/2009

the correct day of the month and subtracting the specified number of months from the given date.

Guideline: ...considering

Guideline: ...the **frequency** of visits and the current visit number, to accurately calculate the elapsed time.
